# Elliptic Curves

## Definitions

- ▶ (Elliptic Curves) Let  $K$  be a field. An elliptic curve over  $K$  is a non-singular cubic curve whose points satisfy the equation
$$Ax^3 + Bx^2y + Cxy^2 + Dy^3 + Ex^2 + Fxy + Gy^2 + Hx + Iy + J = 0.$$
- ▶ (Elliptic Curves over  $\mathbb{F}_p$ ) Let  $\mathbb{F}_p$ , where  $p \neq 2, p \neq 3$  be a finite field. An elliptic curve over  $\mathbb{F}_p$  is a non-singular cubic curve whose points satisfy the equation  $y^2 = x^3 + Ax + B$ , and the non-singular condition  $4A^3 + 27B^2 \neq 0$ .

# Why Elliptic Curves?

## Hard problems

- ▶ (DLP) Let  $p$  be a prime, and let  $a, b$  be integers such that  $a \bmod p \neq 0$  and  $b \bmod p \neq 0$ . Assume there exists an integer  $x$  such that  $a^x \equiv b \pmod p$ . The DLP is then to find  $x$  such that  $a^x \equiv b \pmod p$ . More generally, we have the following. Let  $G$  be any multiplicative group, and let  $a, b \in G$ . Assume that  $a^x = b$  for some integer  $x$ . The DLP is then to find  $x$  such that the above equation is satisfied.
- ▶ Using Elliptic Curves, the same problems becomes the ECDLP:
- ▶ (ECDLP) Let  $P_1, P_2 \in E(\mathbb{F}_p)$ , where  $E(\mathbb{F}_p)$  is an elliptic curve over a finite field  $\mathbb{F}_p$  and  $p$  is a prime, and  $P_1$ , and  $P_2$  is points on the elliptic curve  $E(\mathbb{F}_p)$ . The ECDLP is then to find an integer  $x$  satisfying the equation  $xP_1 = P_2$ .

Interesting Literature

# ECDSA Signature Algorithm

**(Input):** Message  $m$ , private key  $\alpha$ , the elliptic curve  $E(\mathbb{F})$ , and the domain parameters,  $G$ , and  $p$ .

**(Output):** Digital signature  $r, s$ .

**(Algorithm):**

$$h \leftarrow \text{hash}(m)$$

$$k \leftarrow \text{random}(0, n)$$

$$(x, y) \leftarrow kG$$

$$r \leftarrow x \bmod n$$

$$s \leftarrow k^{-1} \cdot (h + r \cdot \alpha) \bmod p$$

**return**  $r, s$

► What would happen if  $k$  is not random?

# ECDSA Signature Verification

**(Input):** Message  $m$ , public key  $Q$ , the elliptic curve  $E$ , and domain parameters of the elliptic curve  $G$ , and  $p$ .

**(Output):** Boolean value. True if the signature is verified as being correct, False if not.

**(Algorithm):**

**if**  $Q = O$  or  $Q$  is not on  $E$  **then**  
    **return** False

**end if**

$h \leftarrow \text{hash}(m)$

$u_1 \leftarrow h \cdot s^{-1} \pmod p$

$u_2 \leftarrow r \cdot s^{-1} \pmod p$

$(x, y) \leftarrow u_1 \cdot G + u_2 \cdot Q$

**if**  $(x, y) = O$  **then**  
    **return** False

**end if**

**if**  $r \equiv x \pmod p$  **then**  
    **return** True

**end if**

**return** False

Interesting Literature

# What mistakes do we see in practice?

- ▶ Using a hash as a nonce
- ▶ "Smart" software made to trick people
- ▶ People trying and failing to do everything "by hand"
- ▶ And more? Let's discuss

# Two methods

- ▶ One utilizing Fourier Analysis
- ▶ One utilizing the Hidden Number Problem and lattice basis reduction
- ▶ Today: The Hidden Number Problem (HNP)

## Definition

Let  $B = [b_1, \dots, b_k] \in \mathbb{R}^{n \cdot k}$  be a linearly independent set in  $\mathbb{R}^n$ . The lattice  $L(B)$  generated by matrix  $B$  is the set of all linear combinations of the columns of  $B$  with integer coefficients.  $B$  is thus a basis for lattice  $L(B)$ .

$$L(B) = \left\{ Bx : x \in \mathbb{Z}^k \right\} = \left\{ \sum_{i=1}^k x_i \cdot b_i : x_i \in \mathbb{Z} \right\}$$

# Lattice Problems

## Definition (Shortest Vector Problem.)

Given a lattice  $L$ , find a vector  $v \in L \setminus \{0\}$  such that  $\|v\| \leq \|u_i\| \forall u_i \in L \setminus \{0\}$

## Definition (Closest Vector Problem.)

Given a lattice  $L$ , and a vector  $u$ , find the lattice vector  $v$  such that  $\|u - v\| \leq \|u - v_i\|, \forall v_i \in L$ .

# Solving Lattice Problems

1. The Lenstra-Lenstra-Lovász Algorithm (LLL)
2. The block Korkine-Zolotarev Algorithm (BKZ)

# The Hidden Number Problem (HNP)

Adversary is given  $d$  pairs of integers  $\{(t_i, u_i)\}_{i=1}^d$

Such that  $t_i x - u_i \pmod p = b_i$  (1)

Where  $|b_i| < B$ , for some  $B < p$
